EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Bruce H. Troxell on March 9th, 2005.

The application has been amended as follows:

In the Claims:

- 1) Claim 1, line 10, the phrase "acting as" has been replaced with the word --is--. Further on line 10, the phrase "in an irregular shape and" has been deleted.
- 2) Claim 1, line 16, the word "certain", before the word "height", has been replaced with the word --predetermined--.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claims 1-5 are allowable over the prior art of record because the prior art of record does not teach or suggest the entire combination of elements of the mouse cable rewind apparatus set forth including a regulating member being a hook body and having two resilient pieces disposed on both sides of the basis of the regulating tube, the center of the regulating member being bored with an oval tooth hole having two raised insertion hooks at both sides thereof, an engaging protrusion extending forwards from the front part of the regulating member; a support plate having a rotating shaft standing uprightly at the center thereof, a laying plate being raised at a

Art Unit: 3654

predetermined height from one side of the support plate and converging in radial direction into a semicircular end, the laying plate having a positioning post at the center thereof so as to allow the attachment of a tooth seat to the laying plate and further having a regulating hole near the positioning post, a laying base with a semicircular spring post being raised at a higher place than the laying plate, the tooth seat being formed as a cylindrical body and having six evenly spaced lower blade teeth on which three evenly spaced upper taper teeth lie, the tooth seat being bored with a tooth seat hole at the center of the bottom thereof. None of the references of the prior art teach or suggest the regulating member and a support plate as advanced above and such do not provide the necessary motivation, absent applicant's specification, for modifying the mouse cable rewind apparatus in the manner required by the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
